

Papers by First Author

First Author Name	Title
Armatys, M.	Ground support for mining through weak graphitic faults at the Casa Berardi mine, Quebec
Aziz, N.	A follow up to the behaviour of cable bolts in shear; Experimental study and mathematical modelling
Bergman, A.	Remediation of large scale structures in open pit mining
Botsialas, K.	A proposed workflow for slope stabilization projects
Bouzeran, L.	Advanced 3DEC bolt model for simulation of ground support performance in highly fractured and bulked rock masses
Delonca, A.	Methodology for stability analysis of entry-type underground excavations
De Rivaz, B.	Fibre reinforced spray concrete- Minimum performance requirement to meet safety needs
Dineva, S.	Local seismic systems for study of the effect of seismic waves on rock mass and ground support in Swedish underground mines (Zinkgruvan, Garpenberg, Kiruna)
Exadaktylos, G.	The contact problem of the supported circular cylindrical underground opening in elastic rock
Forbes, B.	An Optical sensor for capturing the three-dimensional bending of bolts
Carol, I.	Rock bolt behaviour in stress-fractured ground - A FE analysis using zero-thickness interface elements and fracture-based constitutive laws
Guner, D.	Scale effect of thin spray-on liners for pillar reinforcement
Gustafsson, L.	Sensor techniques to monitor installation and status of rock bolts
Hebblewhite, B.	A case study review of the double fatality coal burst at Austar Colliery in NSW, Australia in April 2014
Hills, P.	Ground support and reinforcement system remediation at the Cethana Power Station, Tasmania, Australia
Jones, T.	Production-blast-induced crosscut performance in a weak biotite schist- a comparison of three high-deformation bolt types
Joughin, W.	A risk-based approach to ground support design

Mishra, M.	Real-time risk assessment and ground support optimisation in underground mines
Basarir, H.	Theoretical investigation of the effect of stress on the performance of support systems based on Rock Mass Rating (RMR) support recommendations
Korzeniowski, W.	Strain of steel rebar vs rock bolt elongation on a laboratory stand
Li, C.	Critical embedment length of fully grouted rebar bolts
Li, D.	Parametric study of cable bolt performance under axial loading in medium strength synthetic rock
Lope Álvarez, D.	Tunnelling and reinforcement in heterogeneous ground - A case study
Wrana, A.	Optimisation of gateroad support at the depth more than 1000 m in hard coal mines
Molaei, F.	Experimental and numerical analysis of face pressure in EPB shield in East-West lot of line 7, Tehran subway
Malkowski, P.	Investigations of hard coal mine roadways stability in stratified rock
Mainali, G.	Laboratory investigation of rock-shotcrete deboning due to ice growth using acoustic emission
Moladavoodi, H.	Three dimensional numerical modelling of the deep Alborz tunnels with composite liners in squeezing condition
Morales, M.	Building a structural model for assessing potential pit slope failure - a case of a Norwegian mine
Moser, A.	An experimental study to investigate the interaction of backfill and rock mass
Muñoz Joo, A.	Methodology for incorporating new elements of support for the mine design in El Teniente mine
Näsi, J.	Comparison between dynamic ground support methods (dynamic bolting)
Potvin, Y.	Selection of ground support for mining drives based on the Q-System
Pytel, W.	Dynamic twisted rockbolt for underground excavation in deep mine conditions
Roache, B.	Mining in extreme squeezing conditions at the Henty mine
Saiang, D.	Ground Support Modelling involving Large Ground Deformation: Simulation of Field Observations – Part 1

Saiang, D.	Ground Support Modelling involving Large Ground Deformation: Simulation of Conceptual Cases – Part 2
Shirzadegan, S.	In-situ dynamic testing of rock support at LKAB Kiirunavaara mine
Butler, T.	Ground support practice at Glencore's Nickel Rim South Mine - With a link to seismic monitoring data
Uotinen, L.	Photogrammetric calculation of JRC for rock slope support design
Strømsvik, H.	Pipe umbrella system- Dimensioning and design
Sweby, G.	An instrumentation project to investigate the response of a ground support system to stoping induced deformation
Sweby, G.	A numerical modelling case study - correlation of ground support instrumentation data with a three dimensional inelastic model
Swedberg, E.	Drop testing of concrete panels and welded wire mesh at LKABs Kiirunavaara mine
Turner, R.	Grouting and excavation support in Doha - Simple but challenging
Tonnellier, A.	Integrating microseismic and 3D stress monitoring with numerical modeling to improve ground hazard assessment
Wesseloo, J.	The use of elastic superposition as part of a multi-tired probabilistic ground support design approach
Xu, C.	Discrete element modelling of steel wire mesh and rockbolt plate
Yardimci, A.	Quality assessment of backfill performance for an underground iron mine in Turkey
Yi, C.	Scattering of SH-waves by a shallow circular lined tunnel with an imperfect interface
Yi, C.	Numerical modelling of dynamic response of underground openings under blasting based on field tests
Zhang, P.	Establishment of experimental sites in three Swedish mines to monitor the in-situ performance of ground support systems associated with mining-induced seismicity
Zhu, P.	Failure mechanism related to accelerating creep of rock triggered by dynamic disturbance
